

TERRANTA

# INVITATION

Metals and metal supplies will decide how fast the global energy transition towards a low-carbon emission economy can be realized. Limited resources and exploding demands require smart and knowledge-based investment decisions. Mitigating geological risks and determining the economic potential of mineral deposits is our ambition and will help us to deliver metals to the world economy.

Terranta is inviting your company to participate in and to support the development of a commercial simulator and user interface for Mineral Systems Modeling and prediction. This is a new exploration workflow to integrate data, interpretations and working hypothesis into an understanding of the subsurface geo-processes of mineral systems.

**Join the TERRANTA industry consortium today  
and see your mineral system in action!**

## Your Value:

- Geo-process modeling made easy
- De-risk your mineral exploration projects
- Fit-for-purpose solutions for your exploration challenges
- Maximize the value of your data and knowledge
- Identify superior-value ore deposits with higher confidence.

## Active Consortium Member

As an active member of the development consortium you will have full access to influence the technical scope and to profit from knowledge transfer. Active members will benefit from an individual support and consulting budget to carry out your own case studies at any time.

## Scientific Affiliates

As a scientific partner, you are invited to support the technological development of subsurface mineral deposit forming processes. With your knowledge and data sets, your membership will enable the development of latest scientific insights. Your membership will be free of charge.

**As a member, you will receive significant value to de-risk your exploration projects and generate your own internal IP (workflows, integration and value creation) ahead of your competitors:**

1. Members will be able to use the already available functionality during the development period
2. Members will be closely involved in the development process and the developments will be based on client projects so that specific issues of interest will be addressed
3. Membership fees will be converted to product licenses after the end of the project
4. Participants will not pay enhancement, support and maintenance fees during the development period.
5. The deliverables will be guaranteed and an 'opt-out' option is provided.
